Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 5-25 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-6 of U.S. Patent No. 6,608,963. Although the

Art Unit: 2165

conflicting claims are not identical, they are not patentably distinct from each other because.

Regarding system claims 5-11,

Regarding method claims 12-16,

Regarding system claims 17-21,

Regarding system-means claims 22-25, of the application with respect to patented claims 1-6, the application claims and patented claims are deemed obvious over each other.

Regarding application claims 5-11, patented claim 1 in view of claim 5 are deemed to be obvious variants in view of the application claims further recite, a microprocessor, while claim 1 recite a controller.

Further regarding claim 1 in view of claim 5, claim 5 recite the use of the index memory comprises a bidirectional memory port, while claim 1 fails to be this specific, but is deemed obvious.

The examiner takes official notice that a controller can be in the form of a microprocessor for performing the recited functions, as is obvious, further single ported memory is well known having advantages of being cost effective to use, when the issues for use allow for the utilization, therefore, it would have been obvious to those skilled in the art at the time of the invention to further recite these features (Single Ported Memory

Art Unit: 2165

& the utilization of a controller in the form of a microprocessor), as is obvious to those skilled in the art, that a controller can be a microprocessor thereby providing more versatility as compared to a hardware controller, and the utilization of a memory such as a single ported memory being cost effective is also deemed obvious to utilize.

Claims 12-25, are deemed analyzed and discussed with respect to the claims above and further that the different classes (means claims vs. method and apparatus claims), are also deemed obvious in view of the patented claims in view of the analysis above.

Allowance of claims 5-25 of the instant application would result in a time-wise extension of the monopoly previously granted for the invention defined by patent claim(s), therefore, obviousness type double patenting is deemed proper.
